

# Douglas County Deer Metrics Report

## Spring of 2024

### Management Unit:

### Manager's Note:

The Douglas County Deer Management Unit is located in the Northern Forest Zone. Approximately 95 percent of the unit is considered suitable deer range. Land cover varies greatly from north to south corresponding to soil types and landownership patterns. The northern one-third of the unit is a mixture of agricultural and forest lands comprised of aspen, fir-spruce and white pine dissected by steep drainages. The central portion consists of diverse forest types including aspen, oak, pine, spruce-fir uplands with large amounts of lowland alder and conifer swamps and bogs. The southern portion is heavily dominated by jack pine, red pine and scrub oak dotted with small seepage lakes and ponds. Approximately 52 percent of the unit is open to public hunting including Douglas County Forest, Douglas County Wildlife Area, Brule River State Forest, Red River Stream Bank Protection Area and thousands of acres of industrial forest land open to the public through the open Managed Forest Land and Forest Crop Land programs. Hunter densities on the opening day of the 9-day gun deer season average 8-12 hunters per square mile of deer range. Antlered buck harvest rates average 2-3 bucks per square mile of deer range. A Metro subunit lies within the unit surrounding the city of Superior and covers 35 square miles of mostly urban, suburban and municipal forest open to archery deer hunting through permits administered by the city. The current deer herd management objective is to increase the population as a whole in the county but to maintain the current level within the Superior metro-subunit.

## ***Deer Management Unit Harvest History***

Fawn to doe ratios collected in late summer give information on fawn recruitment and survival and are used as an input into the formula for annual deer herd abundance estimation. Fawn to doe ratios were summarized using groups of county deer management units. County deer management units were grouped based on location, habitat characteristics, and deer demography.

### **Northern Forest Management Zone**

Total Area of Unit (Sq. Miles): 1,338.60

Deer Range of Unit (Sq. Miles): 1,252.40

## Herd Abundance

Deer herd abundance is estimated annually with hunter-collected data and a mathematical model to get post hunt deer population estimates.

## Deer Impacts – Agriculture & Nuisance Impacts

View trends in county and statewide enrollment, shooting permit, Ag Damage, and Nuisance harvest numbers over the years.

### Total Deer Damage & Nuisance Shooting Permits Issued

### Deer Impacts – Deer Vehicle Collision

Deer-vehicle collisions (DVCs) are one of the most visible negative impacts that deer populations have on society. As managing deer involves balancing the positive benefits of deer with their negative impacts, it makes sense to consider DVCs when making deer management decisions.

### Deer Vehicle Collisions

### Hunter Dynamics - Hunter Field Observations

This metric provides voluntary hunter observation data that is collected either during the process of registering a deer, or from submitted field observations through an on-line reporting form.

### Deer Seen Per Hunted Hour
