Washburn County Deer Metrics Report Spring of 2024

Management Unit:

Manager's Note:

The Washburn County Deer Management Unit is located in the Northern Forest Zone. Approximately 87 percent of the unit is considered suitable deer range. Land-cover varies greatly from north to south. The northwestern portion is a mix of jack pine, scrub oak and pine-oak barrens dotted with small seepage lakes and ponds. The soil is sand to loamy sand. The northeast portion is a mix of aspen, hardwoods with expanses of swamps and bogs. The southeast corner of the unit is comprised of rolling hills of oaks and pothole lakes. Farming is common in much of the southern portion and rare in the northern half. Public lands open to hunting comprise 35 percent of the unit. This includes almost 148,000 acres of Washburn County Forest, about 9,000 acres of Department of Natural Resources Wildlife and Fishery Areas, and almost 30,000 acres of industrial forest land open to the public through the open Managed Forest Land and Forest Crop Land programs. The current deer herd management objective is to increase the deer population.

Deer Management Unit Harvest History

Fawn to doe ratios collected in late summer give information on fawn recruitment and survival and are used as an input into the formula for annual deer herd abundance estimation. Fawn to doe ratios were summarized using groups of county deer management units. County deer management units were grouped based on location, habitat characteristics, and deer demography.

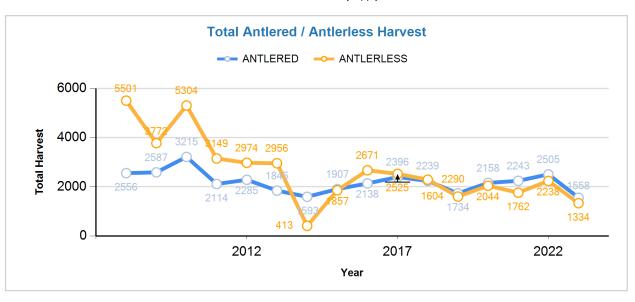

Northern Forest Management Zone

Total Area of Unit (Sq. Miles): 852.80 Deer Range of Unit (Sq. Miles): 748.80

Deer Metrics

Herd Abundance

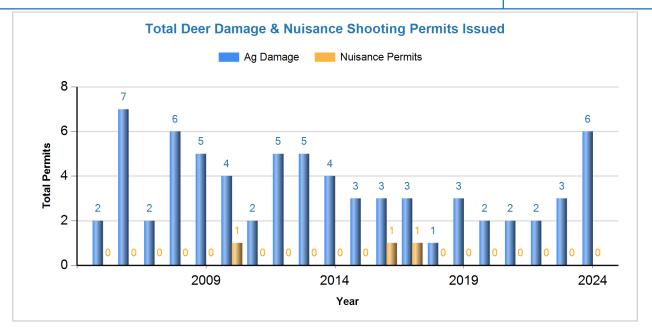

Deer herd abundance is estimated annually with hunter-collected data and a mathematical model to get post hunt deer population estimates.

Deer Impacts - Agriculture & Nuisance Impacts

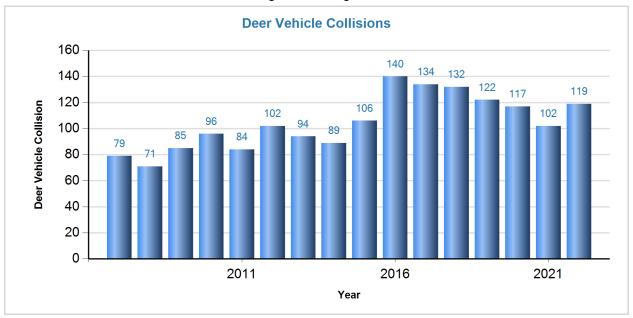

View trends in county and statewide enrollment, shooting permit, Ag Damage, and Nuisance harvest numbers over the years.

Deer Impacts - Deer Vehicle Collision

Deer-vehicle collisions (DVCs) are one of the most visible negative impacts that deer populations have on society. As managing deer involves balancing the positive benefits of deer with their negative impacts, it makes sense to consider DVCs when making deer management decisions.

Hunter Dynamics - Hunter Field Observations

This metric provides voluntary hunter observation data that is collected either during the process of registering a deer, or from submitted field observations through an on-line reporting form.
